To whom it may concern

It is with a great pleasure that I recommend CORTEX dental implants System as I am working with satisfaction since more of five years.

I went first by this firm because of Dr Zvi LASTER, renown as a great maxillo- facial surgeon and thinking head of research and development. By his daily practice he could understand the needs and goals of surgeons in the field of implantology. Dr Meir MAMRAEV the other head of the R&D is also a surgeon who knows what the problems colleagues are facing and he is always searching solutions to facilitate the procedures. Third head of the firm Mr. Shmuel ROZEN is the business man who permits the growing of the firm and development of facilities to lead the implant market. In facts it is the whole people working for this firm who try harder to improve and achieve to help surgeons using the system:

R&D department is eager to help in any case of problem during utilization and when some misunderstanding occurs during surgery ,solution is founded in hours .

Collaboration with dental surgeons around the world is the big idea of CORTEX which lead to constantly improve the system to get better and better as they are opened to any idea or modification leading to simplification of surgical procedures .

Trying to find simple solutions for surgical problems is the goal of excellence of the company

Affordable but technically top quality system , well designed for simple utilization , rationale of everyday surgeries with easy –to- use surgery kits leads to confidence of surgeon .

Big range of implants designed for basic utilization as Dynamix or Classix implants reinforced by specially designed one as Saturn or revolutionary system as Easy2fix is the best part of the firm because they are constantly looking for solutions and launching new systems for security as stoppers for drilling and more to come . Premium presentation of all type of implant is cost cutting because of all parts coming for free .

In my private practice it is a big comfort to use Cortex system because of the simplicity which leads to routine easy surgeries and relax surgeon !!.Large range of different type and shape of implants and only one connection easy to use for prosthetics is great for assistant .Great confidence in the quality gives best surgical results and no unknown clinical issues .

In my quality of opinion leader for France I can see colleagues starting with Coretx system on my recommendation and presentations feeding back very good response to me .

Dr Franck LASRY
